

Keyboard Warrior

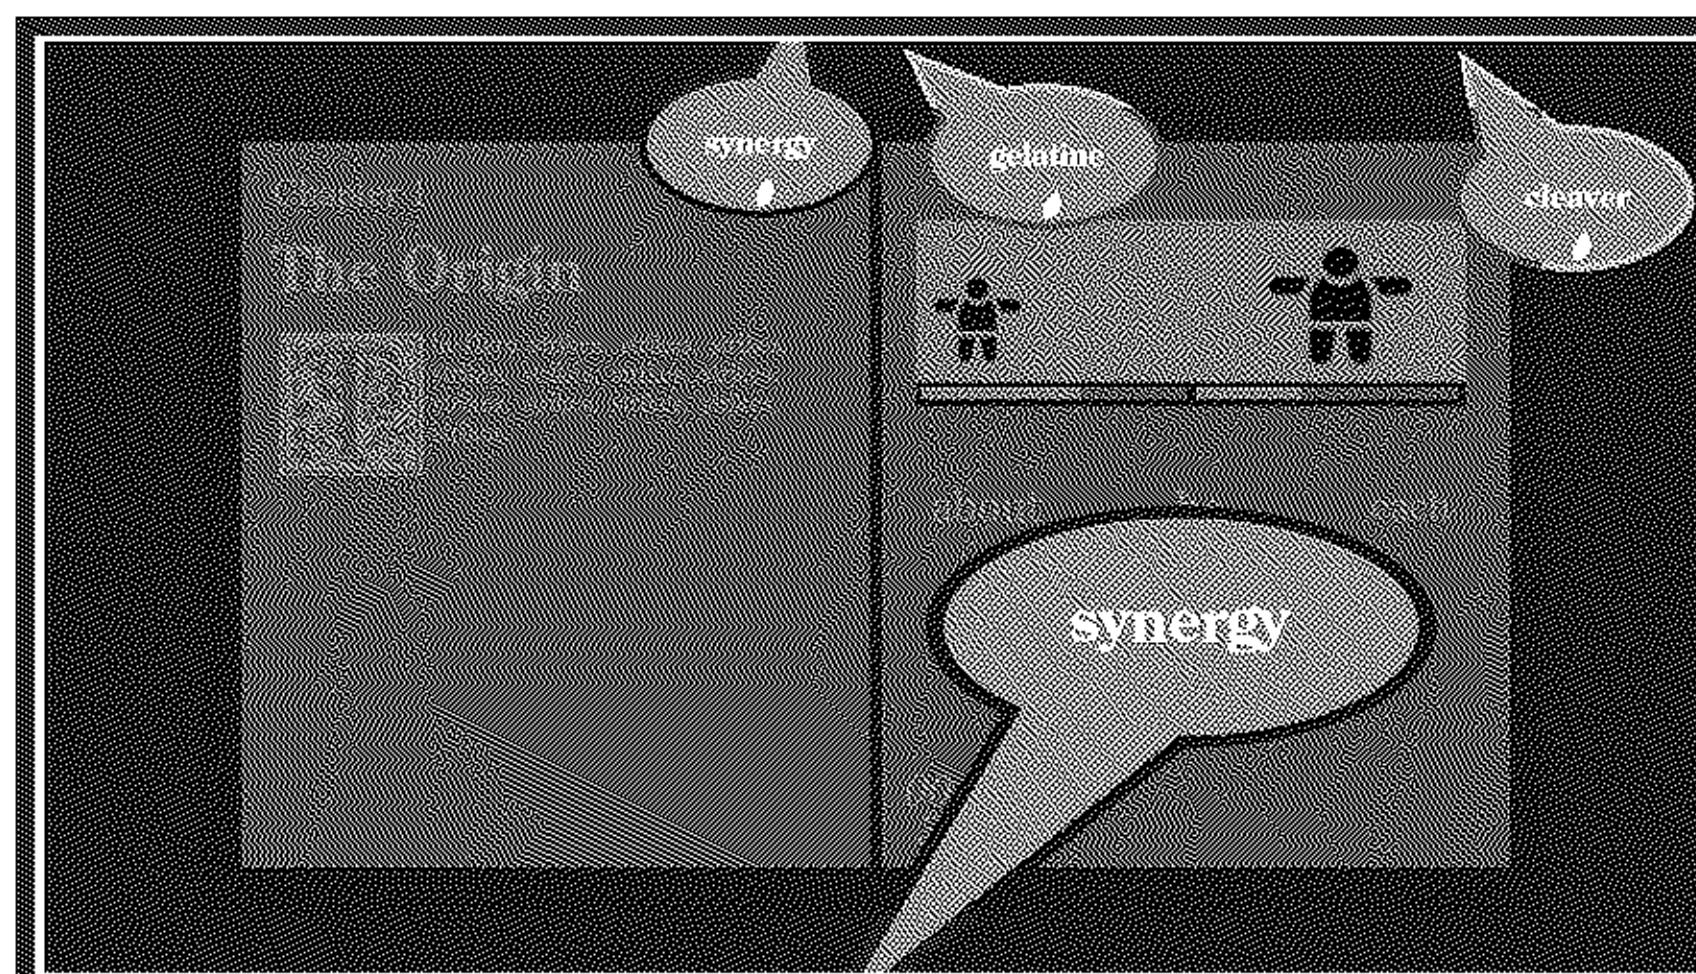

A Typing Roguelike Game

From CMSI 4072

Developed and run with Unity Engine

PREFACE

Keyboard Warrior is a typing video game aimed at improving typing speed, accuracy, and general reaction time.

Practice typing various words accurately and quickly by attacking the opponent and dodging their attacks with the words you need to type.

This project is dedicated to the roguelike genre enjoyers and those who seek to practice their typing in an engaging way.

I am developing this project because I am an avid keyboard builder and collector, often spending time doing typing tests, and playing roguelikes, one of my favorite video game genres.
